

## MapFactor Navigator 2.2 for Android adds more customisation possibilities

Navigator 2.2 version for Android devices released at the beginning of this September brings many exciting and useful changes:

**Alternative routes**, a premium feature introduced in version 2.1, has been further developed and now includes choices for shortest and cheapest routes.

The **Settings dialogue** has been redesigned so that it is better-arranged and easier to navigate.

There is a **new customisable map toolbar** which user will love. The new toolbar is displayed after tapping on the map. Users can select which buttons to display.

Also new is an advanced setting for sound output. It is now possible to select a custom channel for Navigator.

The colour of the navigation arrow is now customisable too.

Further improvements:

- improved Bluetooth audio
- other stability improvements
- many GL rendering enhancements and fixes.
