

MapFactor Navigator 5.0

- a colour changing chameleon

MapFactor Navigator 5.0 has a UI facelift and new app colour themes.

Adorn Navigator in your favourite colour!

Navigator 5.0 introduces a new default theme which is blue to match the main colour of the app icon. For those users, who prefer the original menu, a free alternative with a white menu is available too.

The major change is the introduction of **further 15 colour schemes** (including shades of green, orange, red, pink, purple, brown or black) and a dark night theme. So you can adorn the app in your favourite colour and change it any time according to your current preferences and mood.

The extended colour options are available as a premium feature (for only 1 EUR).

New outlined POI icons

A second set of POI icons - an outlined alternative - is now available as well.

Further improvements concern stability enhancements and bug fixes.
