

MapFactor Navigator 2.5 for iOS brings CarPlay in beta version

New navigation app for CarPlay released! MapFactor Navigator 2.5 for iOS comes with CarPlay Beta with further improvements in the pipeline.

Just a few months after the introduction of Navigator for Android Auto we are pleased to introduce Navigator 2.5 for iOS with support for Apple CarPlay.

Navigator for Apple CarPlay

Drivers will be now able to use MapFactor Navigator on their built-in [car displays with CarPlay connectivity](#). Because they will not need to look at their phones, driving will be safer and more comfortable. Thanks to offline maps Navigator can provide directions **even without an internet connection**.

The great news is that, unlike our competitors, this function is available **completely free in both versions of Navigator for iOS** – [Navigator FREE](#) as well as [Navigator PRO](#).

Navigator 2.5 with CarPlay Beta:

- offline GPS navigation with free OSM maps (Navigator Free) or professional TomTom maps (Navigator Pro),
- turn-by-turn voice guidance,
- detailed directions,
- easy to use – just Plug and Play!
- does not distract driver's attention during navigation,
- other Navigator features for CarPlay:
 - Favourites
 - Points of Interest
 - Live HD Traffic
 - 2D / 3D map mode
 - day / night app mode
 - time to destination
 - distance to destination
 - time at destination (expected arrival)
