

## PC Navigator 26 for Windows brings More Precise Truck Routing

Prague, 30 April 2026 – MapFactor has released a new version of its navigation software for Windows and Windows CE – **PC/Pocket Navigator 26**. The annual update primarily introduces more precise route planning for trucks and large vehicles, along with the latest professional TomTom map data.

### Precision Truck Routing for Even More Accurate Navigation

The key new feature in Navigator 26 is **Precision Truck Routing**, delivering more accurate route planning for trucks and other large vehicles. Navigator now works with point-level data on road restrictions such as low bridges, weight-limited roads, and other obstacles.

While previously restrictions were applied to entire road segments, the navigation now evaluates their exact location. This allows for more accurate route calculation and better real-world guidance – for example, safely guiding drivers to a loading or unloading point located just before a restriction, and approaching it from the correct direction.

As a result, drivers can:

- avoid unsuitable routes and unnecessary detours
- reach their destination more reliably, even in complex areas
- minimize the risk of the navigation failing to find a suitable route or guiding the vehicle to an inappropriate access road

## Designed for Professional Drivers and Fleet Use

PC/Pocket Navigator 26 is designed for professional drivers and fleet management who require reliable offline navigation. The software runs on Windows and Windows CE devices.

It also enables easy integration into dispatching and telematics systems through a set of remote commands, allowing, for example, destinations to be sent directly to the device.

## Latest TomTom Maps

Navigator 26 includes up-to-date TomTom map data available in two variants:

- [Navigator 26 Standard](#) for general navigation
- [Navigator 26 Truck](#) with detailed information on road restrictions relevant to large vehicles

## Availability

PC/Pocket Navigator 26 in both **Standard and Truck versions** is now available via the [MapFactor e-shop](#).

A **discounted bundle** including a **USB GPS receiver** is also available, making it easy to turn a PC or laptop into a complete navigation solution.

## About MapFactor

MapFactor is a trusted developer of navigation software and vehicle tracking solutions with more than 20 years of experience. Its MapFactor Navigator app is available for Android, Windows/WinCE and iOS and has been downloaded by over 50 million users worldwide. The app offers offline maps and reliable voice-guided turn-by-turn navigation for all vehicle types, while the professional Navigator Truck Pro version is specifically designed to meet the needs of truck and large vehicle drivers.

MapFactor also provides a new Maps & Navigation SDK for Android, enabling developers to integrate offline maps and navigation features into their own applications.
